

Tway Lifting Products is proud to announce the installation of a new 100 ton vertical load test machine in Indianapolis.

This Capital Investment strengthens our commitment to The State of Indiana to provide high quality manufactured rigging products and gives Tway Lifting the ability to compete with companies across the region. With a 20 foot subject length, this machine has the capacity to proof load test and certify spreader beams, steel coil lifters, girder clamps and other industrial, construction or maritime lifting devices. Load tests of this magnitude previously needed to be performed at Port Cities where large capacity rigging equipment was provided. Our Indianapolis Plant routinely produces wire rope slings thru 2 inch diameter and certified alloy steel lifting chains 1" diameter and below.

Tway Lifting Products, Located in Indianapolis Indiana manufactures and distributes Heavy Lifting and Rigging Gear used across the country in Construction and Industrial applications as well as Power Generation, Defense, Entertainment and Kinetic Architecture.
